D1	X_0056	Simplification of and amendments to the text.	Wlczek	28. August 2026

1. General Information & Scope

This specification outlines the requirements for all packaging, packaging materials and packaged products ("Packaging") supplied by the Supplier to or on behalf of BSH for the EU market. This includes, but is not limited to:

- Individual packaging components (e.g., boxes, molded inserts, plastic bags, labels) for production materials.
- Complete packaging systems for finished OEM products.
- Packaging for customer service spare parts.
- Transport packaging (e.g., films, straps, pallets).
- Packaging for all indirect materials and goods (e.g., maintenance supplies, office equipment, cleaning agents).

This document is based on Regulation (EU) 2025/40 (PPWR). BSH holds ultimate responsibility for all packaging associated with BSH's products. BSH is dependent on Supplier's collaboration and support in fulfilling the PPWR requirements.

2. Supplier Roles and Documentation Responsibility

To clarify the applicable PPWR requirements (incl. documentation), the Supplier should identify which of the following scenarios applies to the Packaging in question:

- **Scenario 1:** BSH is the Manufacturer in the meaning of Article 3 (1), point (13) PPWR.

This applies when the Supplier supplies:

- a) A complete, BSH-branded OEM product (incl. Packaging).
- b) An individual packaging component produced based on a BSH design or specification.

2.1 What BSH requests from the Supplier in Scenario 1:

In accordance with Article 16 PPWR, the Supplier shall provide BSH with all information and documentation necessary for BSH to demonstrate the conformity of the packaging and packaging materials with the PPWR requirements, including the information and data necessary for BSH to draw up the required Technical Documentation (TD) and EU Declaration of Conformity (DoC).

In case of Scenario 1a) (i.e., the Supplier supplies BSH with a BSH-branded OEM product), BSH needs to receive the corresponding information and documentation already before the first shipment of the corresponding OEM product, in order to be able to carry out the required conformity assessment and to draw up the technical documentation and the DoC.

- **Scenario 2:** The Supplier is the Manufacturer in the meaning of Article 3 (1), point (13) PPWR.

This applies when the Supplier supplies:

- a) Its own standard, off-the-shelf packaging products (e.g., standard boxes, rolls of film).
- b) Packaged goods where the Supplier is the brand owner.

2.2 What BSH requests from the Supplier in Scenario 2:

The Supplier is responsible for compliance with the PPWR requirements applicable to the Manufacturer in the meaning of the PPWR (please see in particular Article 15 PPWR), including but not limited to

- (i) the marking/labeling obligations (see Article 15, Paragraph (5) and (6) PPWR),
- (ii) carrying out the conformity assessment (Article 38 PPWR),
- (iii) drawing up the TD in accordance with Annex VII PPWR and
- (iv) drawing up the DoC in accordance with Annex VIII PPWR for the Packaging supplied to BSH.

3. Requirements for ALL Suppliers

The following requirements apply to all Suppliers, regardless of the scenario:

- a) Compliance with the PPWR requirements for substances in packaging (Article 5 PPWR):

The Supplier confirms that all Packaging supplied to BSH complies with the requirements for substances in packaging according to Article 5 PPWR, including the strict limits for heavy metals and PFAS.

- b) On-Demand Provision of Documentation:

The Supplier must provide all required compliance documentation (either its own TD/DoC or the data for BSH's TD) to BSH within five (5) days of receiving a reasoned request.
